Good day, dear friend Richard !

There is a war in Ukraine and we need a help. We kindly request you with your all your possibilities to support Ukrainian radio amateurs and their families who are now in a bad situation.

At first, we want to provide help to those who going out from the areas where is active fighting, and also who are in occupied territories. Also, there's an aim to support those families who lost their jobs due to war and they're now in really hard life situations.

Humanitarian help such as food, medicine, clothes etc. there's a chance to send, then we get your help and then distribute and send this help to the places where now is needed the most.

In addition, to ensure communication, what we need the most it's radio equipment HF and VHF radio stations (possibly broken - we repair); SWR meters; antenna analyzers; coaxial cables 50 Ohm, insulators, baloons, PL-259, SO-239, BNC, SMA connectors; network equipment, various tools, computer spare parts and components, lightning arresters, power supplies; power banks, solar panels, flashlights, broadcast receivers, mobile phones, and other.

A hard winter is coming, and in addition to the above list, we need gas burnes, heatin pads, electric sheets, fleece items, thermal underwear, lanterns, powerbanks, thermoses and thermal bags.

We are ready to provide detailed photo reports on the use of the received equipment.

Radio amateurs use means of communication, for example, in cities where there is no Internet or telephone. For example, we coordinate aid transport and make emergency radio calls. After the war, we will build club stations with donations. We take an active part in education and work with young people, we offer license courses.
